Sharing your photos and videos  
has never been easier.

FlashAir™ III

# TOSHIBA

Leading Innovation >>>

## Share your photos and videos wirelessly

Embedded with a wireless LAN chip, the latest FlashAir™ acts as a wireless access point for cameras without Wi-fi capabilities, allowing you to share your photos with **up to seven** compatible computers, smartphones or tablets from your camera directly. This means you'll be able to effortlessly shoot and share photos or videos, anywhere, anytime.

## New firmware. New features.

The latest FlashAir™ comes with an improved firmware and two innovative features: Photoshare and WEB DAV.

### • Select and send photos from specific dates only

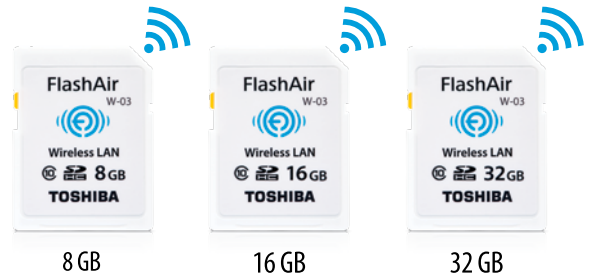

With PhotoShare, you can be more selective with the photos you share. Simply tag the photos of a selected date to share and the other photos in your FlashAir™ III are kept private to you.

### • Directly access your FlashAir™ from your PC

The incorporation of WEB DAV on FlashAir™ III means you can now directly access data stored on your memory card from your computer, without requiring a web browser.

## Energy Efficient

To keep energy consumption to the bare minimum, the wireless function of your FlashAir™ is automatically turned off after five minutes of inactivity.

## Easy wireless set up

It's just as easy to set up your FlashAir™, as it is to use it. There's no need for cables or drivers. Simply slide your card into a camera or camcorder and set up the wireless LAN function with a PC, tablet or smartphone to get started.

### STEP 1

- Download the FlashAir™ App.

### STEP 2

- Insert FlashAir™ in your camera and turn the power on.

### STEP 3

- Turn on Wi-fi. Connect FlashAir™ to Wi-fi. Enter the default password.

### STEP 4

- Once FlashAir™ is connected, launch the app.
- Wirelessly transfer photos/videos with up to seven compatible devices.

FlashAir™ is the trademark of Toshiba Corporation.
